I am opposed to any restriction on Satalite Radio (XM, SIRUS) which would prevent them from providing Traffic and weather services via satalite radio. As an XM subscriber I rely on the traffic station to give constant near-real time update as I commute. The service XM offers is more comprehensive and timely than any other broadcast available to me. Loss of this service would be a loss to many commuters and a disservice to the public at large.

Secondly, I see HR 4026 as an effort on the part of NAB to stifle competition in the market place and as an effort on the part of the FCC to take an additional step toward censorship and errosion of the rights granted by the First Ammdement of the constitution.

Regards.
